SHAW PIPE PROVIDES RUSSELL LAKE WEST WITH SUCCESSFUL CDS STORMWATER SOLUTION

- Removes sediment, trash, and free oil and grease
- Patented screening technology captures and retains 100% of floatables, including all neutrally buoyant material and all other material larger than the screen aperture
- Performance verified through both lab and field testing
- Unobstructed maintenance access
- Customizable/flexible design and multiple configurations available
- Separates and confines pollutants from outlet flow
- Inline, offline, grate inlet and drop inlet configurations available
- Multiple screen aperture sizes available
- Allows for multiple inlet pipes

PROTECTING OUR ENVIRONMENT STARTS WITH CDS BY TREATING ALL STORMWATER BEFORE IT IS DISCHARGED INTO THE ENVIRONMENT.

NEWSUPDATE

PROVIDING THE RIGHT SOLUTIONS.

Shaw Pipe installs Over 100 CDS Units in Atlantic Canada!

Patented continuous deflection separation (CDS) technology

Using patented continuous deflective separation screening technology, the CDS system effectively targets the removal of sediment, buoyant debris and oil and grease from stormwater runoff.

The unique non-blocking screening system allows for 100% removal of buoyant material. The CDS system includes a separate treatment chamber and grit storage sump so that the system continues to operate at optimal

efficiency as sediment accumulates. CDS units can be custom tailored to meet a wide variety of physical and hydraulic site specific conditions including: multiple pipe configurations and

submerged applications. Systems can be provided in offline or inline configurations. Offline units can

treat flows from 30 to 8500 L/s. Inline units can treat up to 255 L/s and internally bypass larger flows up to 1420 L/s (50 cfs). The pollutant removal capability of the CDS system has been proven both in the lab and in the field.

CDS Installed Units

Shaw Pipe provides the following services and/or technical reports for all the CDS Units that we supply:

Provide the designer with a complete sizing estimate package including:

Size the unit required based or site specific hydrology

Model efficiencies, including TSS removal rates based on local rainfall intensity data

Provide CDS model specific specifications if required

Site and project specific drawings in CAD & PDF format

Site specific hydraulic calculations can be provided or a request basis

All that Shaw Pipe requires to provide a complete stormwater treatment proposal is the following:

Drainage are

Weighted run-off coefficient

Time of concentration

Treatment flow that is require

Peak design storm
